

# Reproducible\_report

*Will Pitchers*

*25 August 2015*

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

```
##      speed      dist
##  Min.   : 4.0    Min.    : 2.00
##  1st Qu.:12.0    1st Qu.: 26.00
##  Median :15.0    Median : 36.00
##  Mean   :15.4    Mean     : 42.98
##  3rd Qu.:19.0    3rd Qu.: 56.00
##  Max.   :25.0    Max.     :120.00
```

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

- So maybe I have lists of things:
- thing 1

- thing 2
- tacos
- Ned Niederlander

...and maybe there are tables involved:

name	legs
thing 1	4
thing 2	4
tacos	0
Ned Niederlander	2

```
library(ggplot2)
min( diamonds$price )
```

```
## [1] 326
```
